Subject: USEPA Region 8 Validated Data Posted

I wanted to let you know that the EPA sediment samples collected in the Animas River from Bakers Bridge to north of Durango have been validated.

EPA has done a review of the data which included a comparison to background to determine if the metal concentrations are consistent with pre-incident levels. Metal results that exceeded pre-incident levels were subsequently compared to risk-based screening levels. These results indicate that minor exceedances of background concentrations were observed for antimony, lead, silver, thallium. However, comparison to risk-based screening values found these exceedances to be below risk screening levels. The review and interpretation of these data was a collaborative effort that included state and local members of the unified command.
